EDUCATION

Turing Scholar CS Honors, University of Texas at Austin

B.S Computer Science Honors, Minor in Business (GPA: 3.86)

- **Concentrations:** Machine Learning, Computer Systems
- **Honors Courses:** Data Structures, Algorithms, Machine Learning, Operating Systems, Programming Languages, Computer Architecture
- **Selected Courses:** Neural Networks, Distributed Computing

EXPERIENCE

Coinbase

Software Engineer - Infra, Developer Experience | June 2025 - Present

- Built a **staging onboarding agent** to automate & standardize production-readiness (infra, dependency, observability) for ~1500 services
- Built an MCP server for E2E test generation on critical flows, increasing test coverage & release-gate adoption by ~50%
- Reduced staging setup time from weeks to hours, yielding an estimated **\$25M in engineering & incident prevention savings**
- Built a Slack bot to triage staging failures for critical flows, streamlining on-call operations and improving staging incident response

Huth Lab at the University of Texas at Austin

Honors Thesis | Feb 2023 - May 2025 | Professor Alexander Huth

- Worked on reconstructing speech audio from fMRI-recorded brain signals using machine learning with applications for restoring communication abilities to individuals who are unable to speak
- Designed algorithm to recover acoustic properties using a **regression-based ML model**, an **audio codec**, & a **neural network**
- Authored and successfully defended undergraduate honors thesis on speech reconstruction research

IMC Trading

Software Engineering Intern | Jun 2024 - Aug 2024

- Worked on the Equity Options quoting team using **Java** and **SQL**
- Drastically improved trading PnL by designing signal-driven quoting rules that adjusted execution volume and duration across exchanges based on intraday market activity
- Improved post-trade analysis by enriching trade data with quoting metadata, enabling a more granular evaluation of trading strategies

Omphalos Lifesciences

Software Engineering Intern | May 2023 - Aug 2023

- Built an IDE in Unreal Engine C++ for a proprietary language (L++), including frontend editor, syntax highlighting, and compiler/execution pipeline
- Implemented simulation-based data visualization tools to model biological and chemical processes for quantitative analysis
- Authored seed grant proposals, aiming to secure an estimated \$275,000 in funding

PayPal

Machine Learning Engineering Intern | May 2022 - Aug 2022

- Applied machine learning algorithms to improve data quality in PayPal's issue reporting and management system
- Developed custom **ensemble ML model** in **Python**, achieving ~ **80%** accuracy in predictions for missing data on user-reported issues
- Developed **TF-IDF and BERT** based model in **Python** to identify user-submitted issues that were previously fixed, helping avoid duplicate issue resolution efforts

PROJECTS

Sharded Key-Value Store | Java

- Designed/implemented a sharded, fault-tolerant key/value storage system in **Java** using Paxos-based consensus to ensure linearizability and high availability across distributed servers
- Implemented shard reconfiguration protocols, enabling load balancing among replica groups

HONORS

- **Texas Interscholastic League Scholarship Winner:** Awarded for state-level excellence in competitive math and computer science
- **National Merit Finalist & Scholarship Winner:** Awarded out of nearly 50,000 students for sustained academic excellence
- **AIME Qualifier (2x)**

SKILLS

- Python, Java, PyTorch, C++, Go, Postgres, SQL, Git
